Customer Agreement

•By placing an order, the customer agrees to Bella Boxed Candles terms and conditions.

General Burning Guidelines:

Please follow all of the guidelines listed below as they will help ensure the safety of you and your loved ones!!

Trim wick to 3/8" each time before lighting. You may need to extinguish the candle, and trim the wick back to 3/8" after several hours of burning. DO NOT trim too short! This will result in a small flame and the melt pool will not reach the edges of the jar. Always burn candle at least until the wax has liquefied to the edge of the jar. A general rule of thumb is one hour per inch of width of the candle. This will prevent any chance of tunneling. Example: A 2" wide candle will need to burn for at least 2 hours. Our candles are tested to burn in room temperatures averaging 70°. Keep in mind your burning environment. If your room is at 85°, your candle may burn faster and need the wick trimmed more often. Keep wick centered and melt pool free of wick trimmings. When your wax burns down to the last 1/2", it is time to dispose of it. Please remember, candles must be burned away from drafts and on a stable heat resistant surface. Please DO NOT allow water or moisture to mix with the wax. This can cause splattering and popping of the wax! Candle care and burning is a responsibility. Please burn wisely!! Keep candles away from children, pets and curtains! All candles come with a warning label attached to the bottom – Please read it! Remember, Never Leave A Burning
